# Adaptive Multimodal Corrective RAG (AMCRAG)

Abstract: Large Language Models frequently suffer from hallucinations when reasoning over complex documents. In this paper, we propose AMCRAG, combining dense semantic search, sparse lexical retrieval, and ColPali visual embeddings with a corrective verification loop.

## Section 2: Document Ingestion Pipeline

Person 1 is responsible for Document Processing and Knowledge Base Preparation. The module extracts page-wise text using PyMuPDF, prepares page image representations for visual retrieval, chunks text with page provenance, and exports structured JSON records.
